

PLASKOLITE

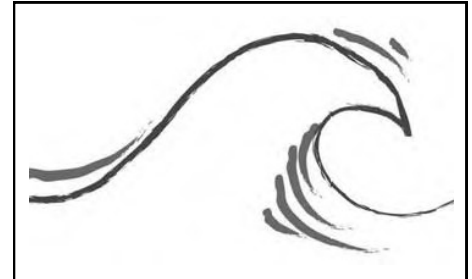

MARINE GRADE

Marine Grade is a high quality, premium grade of Fabback acrylic mirror sheet.

This shatter-resistant mirror is used heavily in boat/yacht cabin areas, including bathrooms, bedrooms and main areas.

Marine Grade Mirror Sheet is double inspected throughout each manufacturing process to ensure maximum quality standards.

Offered in 3mm and 6mm, 2440 x 1220mm, papermasked 2 sides. Abrasion Resistant Coating available.

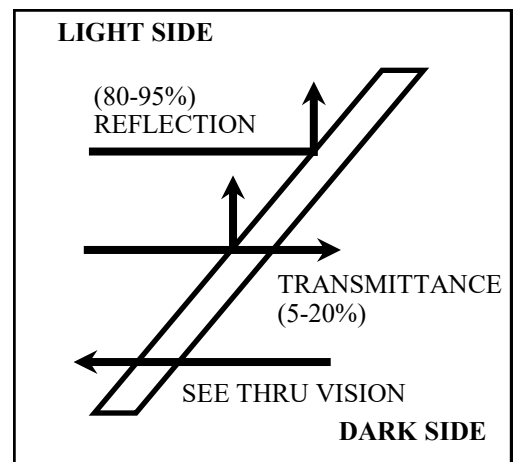

SEE-THRU MIRROR

“See-Thru”, sometimes called two-way mirror, is a semi-transparent film of aluminium deposited on an acrylic or polycarbonate substrate. This allows a percentage of incident light to pass through while reflecting the remainder.

From the illuminated side, it is a mirror. From the darkened side, it becomes transparent.

“See-Thru” has been used successfully in monitoring and surveillance operations in such places as stores, correctional and psychiatric institutions, hospitals, and casinos. “See-Thru” is also used to make infinity lights and multiple image devices. It can be used in advertising and for special theatrical props and effects.

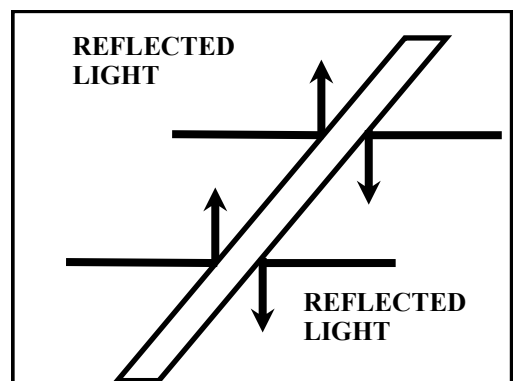

“See-Thru” is available in 3mm and 6mm, 2440 x 1220mm.

FIRST SURFACE (2 sided) MIRROR

“First Surface” (two sided mirror) consists of an opaque film of aluminium, protected by a tough clear coating. Light incident from either direction is reflected.

“First Surface” is often used in retail display and special lighting. The dual surface reflection property is ideal for those applications where the back side of the mirror will remain exposed, or where a reflection in both directions is desired. It is available in acrylic and polycarbonate in 3mm and 6mm, 2440 x 1220mm.

TEXTURED ACRYLIC MIRROR

Two interesting textures for special design needs. (Non-glare and PL-21 Prismatic)

Available in 3mm, 2440 x 1220mm.
