Model No	Description	Size
ONV-270-18	Acrylic Mirror Three Quarter Hemisphere Dome	18" (460mm) DIA approx.
ONV-270-26	Acrylic Mirror Three Quarter Hemisphere Dome	26" (660mm) DIA approx.

The 270° Corner Dome serves the same purpose as the full dome except it is not centrally located in an intersection. Usually when a 270° dome is used it is in an area with narrow aisles or in a reception/lobby of a building.

This dome is for mounting on an outside corner of a 4-way intersection, providing a view of all directions. The mounting system has a set of springs that draw the dome into place.

Key Features:

- **Virtually unbreakable**
The potential danger and liability of having treacherous glass overhead is eliminated.
- **20% Brighter**
Special mirroring techniques provide a 20% brighter image than glass.
- **Less Distortion**
Special forming techniques provide an optical image that is superior to glass.
- **Longer Lasting**
Made from high quality Acrylic and will not discolour over time as glass frequently does.
- **Lighter Weight**
As Acrylic is much lighter than glass, it is easier to handle and install.
- **Economical**
Less expensive and eliminates the high cost of replacing broken glass mirrors.

The view distance ratio is about 1 foot of viewing distance to each inch of the diameter of the dome.
